

DYNAMIC BAR CODING

Bortell's Dynamic Barcoding and Labelling adds important functionality to the Microsoft Dynamics GP environment.

Dynamic Bar Coding allows you to streamline your business and increase the speed of operations. You can use existing barcodes or create your own, as well as print price tickets and labels in a variety of formats. A scanner interface is available.

Where an item Number in Dynamics GP is required, a scanner can be used to lookup the item, alleviating the task of having to key in the item number. In addition, alternate names can be utilised to identify items. Multiple alternates can be utilised for each item.

Barcodes have broad application for many aspects of your business such as purchasing, receiving, inventory, sales orders and more. Implementing barcodes will save time and money, prevent costing and pricing errors and provide an audit trail.

Dynamic Bar Coding is specifically designed to integrate seamlessly with Microsoft Dynamics GP.
